An ideal candidate should be a master of JavaScript and should have excellent knowledge of HTML5, CSS3. Comfortable working extensively on JavaScript frameworks and UI Libraries (React.JS). Person should be confident about creating pixel perfect, reusable, extensible, flexible, high-performing front-end experiences that integrate seamlessly with back-end code.

PRIMARY RESPONSIBILITIES:
- Expert knowledge of JavaScript and Experience with front-end frameworks (React.js, Redux, angular). Good Knowledge of HTML5 and CSS5.
- An ability to adapt the ever-changing technology landscape. Person should be confident about keeping up-to-date by experimenting with new technologies and frameworks.
- Proficient in UI frameworks such as Angular or frontend libraries such as React.
- Proficient in JQuery. Working knowledge of Node.js
- Have working knowledge of CSS extension language such as Sass.
- Hands-on experience using a CDN such as Akamai or AWS Cloudfront.
- Strong focus on User experience and strong computer science fundamentals.
- Knowledge of git and agile development practices.
- Knowledge of testing tools such as Jasmine, Protractor.
- Building reliable and robust applications.
- Openness and adaptability, also require an ability to collaborate across teams.

SECONDARY RESPONSIBILITIES:
- Build web applications for desktop and mobile browsers based on the requirements.
- Should be able to create reusable style guides based on wireframes from the designer.
- Should be able to demonstrate sufficient expertise in creating and maintaining style sheets.
- Can give design inputs that reflect practical considerations of building a web application.
- Should be able to provide reasonable estimates for completion of tasks assigned.
- Should be able to optimize the website for peak performance.

ESSENTIAL EXPERIENCE, SKILLS AND ABILITIES:
- Education requirement is BCA, BE, B-Tech or MCA.
- Good Knowledge of object-oriented programming.
- Good communication skills (oral and written).
- User authentication and authorization between multiple systems, servers, and environments.
- Experience to build scripts by using tools like Bower, Grunt and Gulp.
- Experience building data-driven web applications.
- Understanding of HTTP protocol including Web Sockets.
- Proficient understanding of Git and related services like GitHub, Gitlab, etc.
- Desire to work in a fast-paced and dynamic environment.
